In theoretical physics, the term renormalization group (RG) refers to a formal apparatus that allows systematic investigation of the changes of a physical system as viewed at different scales. In particle physics, it reflects the changes in the underlying force laws (codified in a quantum field theory) as the energy scale at which physical processes occur varies, energy/momentum and resolution ...

3 Quantum Algorithms and Applications. A bedrock of the field of algorithms lies in the principle that the total number of computational steps required to solve a problem is (roughly) independent of the underlying design of the computer—remarkably, to a first approximation what is designated a single step of computation is a matter of convenience and does not change the total time to solution.

Almost every high energy experiment, large or small, is a result of international collaboration: for instance, one detector installed around one of the collision points of the accelerator at the Fermi National Laboratory is run by a collaboration of four foreign and thirteen U.S. institutions, involving some 200 physicists.
