CakePHP comes with a set of view helpers that make tasks like creating links, forms, and pagination buttons easy. You can learn more about Helpers in their chapter, but what's important to note here is that the `link()` method will generate an HTML link with the given link text (the first parameter) and URL (the second parameter).

Commodore 64 Programmer's Reference Guide - C64-Wiki

PHP is a general-purpose scripting language especially suited to web development. It was originally created by Danish-Canadian programmer Rasmus Lerdorf in 1994. The PHP reference implementation is now produced by The PHP Group. PHP originally stood for Personal Home Page, but it now stands for the recursive initialism PHP: Hypertext Preprocessor.
