1.3 Design of Feedback Control Systems. Feedback control systems must be designed to suit a predetermined purpose. Normally, only the controller can be appropriately designed, whereas the process and the sensor are predetermined or constrained. Feedback control systems can be designed to achieve specific behavior of the output

Feedback Systems and Feedback Control Systems

In a positive feedback control system the setpoint and output values are added. In a negative feedback control the setpoint and output values are subtracted. As a rule negative feedback systems are more stable than positive feedback systems. Negative feedback
