One of the great features of Drupal is the ability to control how and what people can access on your site. You can set permissions for these "users" to define who can do what for Drupal core features and contributed modules. For example, you probably won't want casual visitors to edit your homepage. However, the site owner or trusted user should be able to do so.

Connections per Second. Connections per second (CPS) measures the ability of NGINX to create new TCP connections back to clients that have made requests. Clients send a series of HTTP or HTTPS requests, each on a new connection. NGINX parses the requests and sends back a 0-byte response for each request.

Testing the Performance of NGINX and NGINX Plus Web ...

The second one is also not preferable as time of arrival of data is uncertain and I want the plot to update only when the data is received. Is there a way in which I can update the plot just by adding more points to it only when the data is received?
