Laser glass is the heart of the NIF laser system; it's the material that amplifies the laser light to the very high energies required for experiments. NIF's laser glass is a phosphate glass that contains a chemical additive with neodymium atoms (Nd:glass). Neodymium-doped laser glass is the preferred gain medium for use in high-peak-power lasers for fusion energy research.

Tips and Tricks for Glass Engraving - Trotec Laser

Nd:YAG lasers are also employed to make subsurface markings in transparent materials such as glass or acrylic glass. Lasers of up to 2 kW are used for selective laser melting of metals in additive layered manufacturing. In aerospace applications, they can be used to drill cooling holes for enhanced air flow/heat exhaust efficiency.

Nd:YAG laser - Wikipedia

Bancheros Glass Etching is a glass company specializing in custom glass etching, frosted glass, etched glass designs and sandblasted glass creations. We use a sandblasting glass technique in etching glass so the design is etched in the glass, it will never wear off or wear out. If you have a question call (253) 854-4877
