Handbook of Targeted Cancer Therapy and Immunotherapy

Targeted therapy is a type of cancer treatment that uses drugs designed to "target" cancer cells without affecting normal cells. Cancer cells typically have changes in their genes that make them different from normal cells. Genes are part of a cell's DNA that tell the cell to do certain things.

Targeted Therapy - American Cancer Society

replicating or proliferating. Targeted therapies are also sometimes called molecularly targeted therapies or drugs. The goal of targeted therapies is to rid the body of cancerous cells while leaving normal cells unharmed. By focusing on changes in the cell that are specific to cancer, targeted cancer therapies may

Targeted Therapies in Cancer - researchadvocacy.org
