About 2 million U.S. homes are believed to have solid aluminum branch-circuit wiring. Solid aluminum wiring is a recognized fire and safety hazard. Today, Americans homes draw more electrical current through these aging circuits. Overloaded convenience circuits may exacerbate the issues associated with older solid aluminum wiring. This can result in overheated plugs and receptacles that may ...

Aaron's answer isn't bad, but Tester101 has a point, which is that you need a competent electrician watching you, correcting any mistakes you might make. You should probably take a course on residential wiring to get your feet wet, and then you'll have a much better understanding of how it works and learn some of the do's and don'ts.

The value must account for the component and manufacturing tolerances contributing to leakage current (the tolerances of the Y capacitors and the variation in primary-to-ground wiring capacitances). For example, if the 250-volt leakage current is 2.0 milliamperes, then the hi-pot current for a 1500-volt hi-pot test would be:
