Image-based lighting can be used to brighten a rendered image while also improving the contrast to areas with shadows. Photographic exposure settings allow you to adjust the exposure level of the light in a scene and change the white balance to make the lighting appear cooler or warmer in color.

An Introduction to AutoCAD for Beginners

Natural infrared. Sunlight, at an effective temperature of 5,780 kelvins (5,510 °C, 9,940 °F), is composed of near-thermal-spectrum radiation that is slightly more than half infrared. At zenith, sunlight provides an irradiance of just over 1 kilowatt per square meter at sea level. Of this energy, 527 watts is infrared radiation, 445 watts is visible light, and 32 watts is ultraviolet radiation.

The real-time demonstration attracted a lot of attention for its lack of time needed to gather training data. The new paGAN 2 hybrid process is different. It runs in real-time but combines a new inferred synthetic face into a CG scene, replacing not images seen from a webcam, but the face of a digital character in the game engine.
