1.40, p.18-19). We construct a measure for an infinitely often repeated random experiment with finitely many possible outcomes (Product measure, Bernoulli measure). Let S be the set of possible outcomes. For $s \in S$, let $p_s > 0$ be the probability that s occurs. Hence $\sum_{s \in S} p_s = 1$. For a fixed realization of the repeated experiment, let $z = (z_1, z_2, \dots)$
