Quantum biology is the study of applications of quantum mechanics and theoretical chemistry to biological objects and problems. Many biological processes involve the conversion of energy into forms that are usable for chemical transformations, and are quantum mechanical in nature. Such processes involve chemical reactions, light absorption, formation of excited electronic states, transfer of ...

The rate of formation of both new neurons and new synapses during prenatal brain development is staggering. As shown in Figure 3-2, during a period of neuronal proliferation between 5 and 25 weeks of gestation, new neurons are generated from neural stem cells at a rate as high as 250,000 per minute. In a slightly later but overlapping period, synapses are produced at a rate of 40,000 per second.

The tumor microenvironment is highly complex, and immune escape is currently considered an important hallmark of cancer, largely contributing to tumor progression and metastasis. Named for their capability of killing target cells autonomously, natural killer (NK) cells serve as the main effector cells toward cancer in innate immunity and are highly heterogeneous in the microenvironment.
