This means that the 14:05 interval has 2 samples to example at when calculating the Minimum or Maximum. Example: Finding Minimum and Maximum of Changing Data. The following example uses a value that continually changes, rather than one that simply slopes upwards or downwards. Any Minimum or Maximum within an interval is necessarily a raw sample.

6 Minimum Mode 8086 System The microprocessor 8086 is operated in minimum mode by strapping its MN/MX pin to logic 1. In this mode, all the control signals are given out by the microprocessor chip itself. There is a single microprocessor in the minimum mode system. The remaining components in the system are latches, transreceivers, clock generator, memory and I/O devices. Latches are generally ...
