The Rational Method equation is:  $Q = C \times I \times A$  where:  $Q$  = Storm Water Runoff (in cubic feet per second)  $C$  = Coefficient of Runoff  $I$  = Rainfall Intensity (in inches per hour)  $A$  = Area of Drainage Zone (in acres) The equation above can be modified to give you runoff in gallons per minute.

## **How To Calculate Drainage**

Mucus is a substance normally produced by the body. It serves an important role, as it moistens, cleans and protects the lining of the nose and sinuses. But when this mucus is abnormally thick or

Nasal drainage is an inconvenient and often embarrassing symptom that often accompanies upper respiratory infections and allergic rhinitis. However, this cumbersome mucous serves an important purpose. Mucous-producing tissue lines the nose, sinuses, throat, mouth, lungs, and gastrointestinal tract. Mucus works as a protective blanket over these surfaces and prevents the tissue under these areas from drying out.
