Angiographic Changes Suggestive of ... - Wiley Online Library

If similar headaches recur in patients who appear well and have a normal examination, the cause is rarely ominous. Headaches that have recurred since childhood or young adulthood suggest a primary headache disorder. If headache type or pattern clearly changes in patients with a known primary headache disorder, secondary headache should be ...

In up to 25 percent of patients, the migraine headache pain may be preceded by an aura, a temporary neurological syndrome that slowly progresses and then typically resolves just as the pain begins. While the most common type of migraine aura involves visual disturbances (flashing lights, zigzags, blind spots), many people experience numbness ...

Migraine Headaches | Johns Hopkins Medicine

Headache is one of the most common neurological problems, affecting 2/3 to 3/4 of people at some point in their lives, and almost 50% of people will have headaches in any given year. About 90% of headaches are considered "primary headaches" which are benign and not due to a brain disease or structural problem.

Headaches | Neurology

There are many cross-cutting measures (depression screening, tobacco cessation) and neurology-specific measures (headache, imaging, oncology) that neurologists may find useful. The National Quality Forum maintains a database of measures it has endorsed.

Quality Measures - American Academy of Neurology

A patient who has headaches as many days as not — at least 15 days per month — is said to have chronic daily headache (CDH). Not a specific type of headache, CDH is rather a descriptive term applied to any number of headache types. Headaches that can occur on a daily or near daily basis include ...
