After starting the engine, carry out any needle-valve readjustments from a safe position behind the rotating propeller. Stop the engine before attempting to make other adjustments to the carburettor. Adjust the throttle linkage so that the engine stops when the throttle stick and trim lever on the transmitter are fully retarded.

Do NOT, repeat NOT run standard Cool Power 15% in the YS engine. PLEASE at least run a heli blend if you go with Cool Power (or else add some extra oil)! The Heli blends have higher oil content. IIRC standard Cool Power is 17% oil, and the heli mixes are closer to 20% - 22%. Personally I run a YS 20/20 blend and the engines love it.
