Attenuated Total Reflectance (ATR) is a sampling method for the compositional analysis of a wide range of solid and liquid materials. Because ATR accommodates the analysis of complex, optically dense solutions without any sample preparation, ATR has proven valuable for in situ FTIR investigation of chemical reactions.

The authors noted that seasonal differences factored into the model accurately predicted the different concentrations of pellets along the coastline over time. It further suggested that the coastal ocean patterns may be influenced in the short term (seasonally), while the open ocean debris would be affected over longer time scales.

x As early life interventions for congenital heart disease (CHD) improve, more patients are living to adulthood and considering pregnancy. Scoring and classification systems predict maternal cardiovascular risk of pregnancy in the context of congenital heart disease but these scoring systems do not assess the potential subsequent risks following pregnancy.

However, that wasn't the end of the Tatmadaw's program of mass torture, rape and slaughter. After the coup of February 1 of this year, that same army turned on its own people. The Tatmadaw has been conducting torture, rape and slaughter of the ordinary Burmans, the Burmese people. And this time it isn't fizzling the way it did in 2007.
