## **Solutions to Jaan Kalda's Handouts - Physics Olympiad**

Choose the standard  $(xy)$  coordinate system, since it aligns well with the forces.. The wall at  $(A)$  is a fixed support which prevents the beam from translating up, down, left or right, or rotating in the plane of the page. These constraints are represented by two perpendicular forces and a concentrated moment, as shown in Figure 5.2.1. Label these unknowns as well.
