Syntax, Semantics and Pragmatics We pursue research in the formal, generative tradition in syntax and semantics and their interfaces with other areas of the grammar such as pragmatics, discourse structure, and morphology, and the relation between grammatical structures and language processing.

The field of semantics focuses on three basic things: "the relations of words to the objects denoted by them, the relations of words to the interpreters of them, and, in symbolic logic, the formal relations of signs to one another (syntax)" [1].

This study aims to demonstrate that such a naïve assumption fails to explain the complexity of this system. The syntax, semantics, and pragmatics of addressee-honorific markers all exhibit unexpected and intriguing behaviors that cannot be easily explained or predicted by extant theories.

It involves a collection of rules which validates the sequence of symbols and instruction used in a program. The pragmatic and computation model figures these syntactic components of a programming language. The tools evolved for the specification of the syntax of the programming languages are regular, context-free and attribute grammars.
