BBC One - Uncovering Our Earliest Ancestor: The Link

To scientists, a true link between, say, humans and our closest living relatives, chimps, would be the single ancestral species that split into two lineages, one ultimately giving rise to living chimpanzees and the other to modern humans. Yet the paleontological record is spotty — less than 1 percent of all the species that ever lived are known to us as fossils — so we can't expect to find the remains of that single ancestral species.
